FORUS S.A
Retail Business

Abstract

During my internship at Forus S.A., I worked in the Sustainability Sub-Management under the supervision of Francisca Menichetti Pilasi. My main responsibilities included contributing to the 2024 Annual Report, focusing on sustainability, and developing a database to classify sustainable product attributes across the company's brand portfolio.

The Annual Report task required extensive research, data collection, and coordination with brand managers to ensure accurate reporting of sustainability initiatives. I also participated in meetings with external agents to optimize compliance with the Extended Producer Responsibility (REP) Law, reinforcing Forus's commitment to environmental sustainability.

One of the biggest challenges was building a database to identify sustainable products. This process involved organizing more than 7,600 SKUs and 109 columns in Excel, using dynamic tables, conditional formatting, and advanced filters. This tool will facilitate the tracking of sustainable products and help Forus adapt to future regulations.

Additionally, the internship allowed me to gain insights into retail operations, from in-store activities to sustainability management. I collaborated with Investor Relations and Sustainability teams, strengthening my communication and project management skills.

The internship experience was essential for my professional growth, enhancing my technical skills, fostering personal development, and providing valuable insights into the operations of a large company.

1. Introduction

1.1 Company Description

Forus S.A. is a company in the retail sector that specializes in footwear, clothing, and accessories for women, men, youth, and children. It was founded in August 1980 and began its operations as Hush Puppies Chile Ltda. Through the years, the brand portfolio and operations of the organization have expanded, building a strong position in the design, development, and distribution of footwear, apparel, and accessories. Currently Forus is operating in four countries: Chile, Peru, Colombia, and Uruguay, successfully integrating both international and in-house brands into its portfolio.

This organization distributes 28 prestigious international and proprietary brands, including Columbia, Under Armour, Vans, Hush Puppies, Rockford, among others. These brands cover multiple sections including outdoor, action sports, athletic wear, lifestyle, and safety footwear. The company operates under a phygital ecosystem that effectively integrates physical stores, proprietary e-commerce websites, and marketplaces. This approach ensures a superior customer experience across all channels.

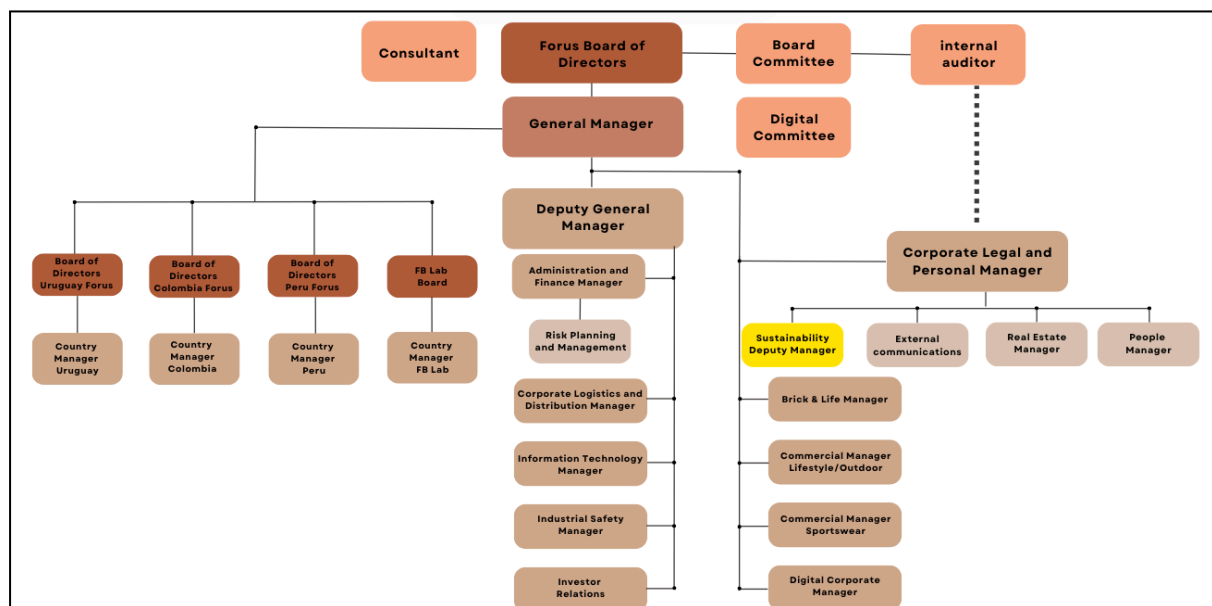

Image 1: General diagram of the company

This image shows the company's structure, which is led by the Board of Directors and General Management, with key areas such as Finance, Sustainability, Logistics, and Digital, as well as regional management in Colombia, Uruguay, and Peru. In addition, there is a close relationship between the different areas of the company, which is essential for optimizing operational efficiency and fostering collaboration among teams.

The company's long journey has led to an organization with 3,421 employees. This large team reflects Forus commitment to growth and continuous development. Furthermore, total sales in 2023 reached 326,555 million pesos, supported by a strong network of sales channels that includes 399 physical stores, 46 e-commerce websites, and participation in 13 marketplaces.

1.2 Area Description

In 2023, Forus created a Sustainability Sub Management, led by my supervisor, Francisca Menichetti Pilasi. The mission of this area is to identify the environmental, social, and governance (ESG) issues that have the greatest impact on the company, its stakeholders, and the environment, with the goal of focusing efforts and resources on initiatives that allow for progress and the monitoring of these key aspects.

The Sustainability department integrates sustainable practices into all operations of the company, standing out for implementing circular economy projects and waste management, such as the "Paperless" program and compliance with the REP law (Extended Producer Responsibility), where I worked on some projects related to it. It also develops sustainability indicators for products and leads initiatives like 'For the Community,' promoting corporate volunteering and activities with a positive social and environmental impact

This department reports directly to the Legal and People Management, which allows it to address sustainability issues from a corporate perspective and work on them strategically. Additionally, it collaborates closely with the Investor Relations Management, ensuring that sustainability initiatives align with stakeholder expectations and that progress on ESG matters is effectively communicated.

During my internship, I participated in various projects, the most important being the preparation of the company's Annual Report 2024, with a special focus on the sustainability section. To develop this task, it was necessary to do a lot of research and also coordinate meetings with all the company's brands, which allowed me to work directly with the brand managers to gather information about their sustainable initiatives.

Additionally, I worked closely with Martina Avsolomovich, an intern of Isabel Darrigrandi, Head of Investor Relations (as Francisca and Isabel were responsible for drafting the document of the Annual Report). I also developed an extensive database to classify and track sustainable attributes across all the brand's products. This task allowed a more comprehensive understanding of their sustainable offerings, helping the company to identify environmentally friendly products more effectively.

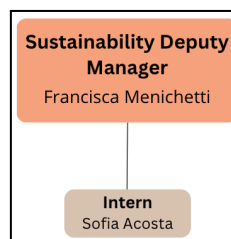

Image 2: Sustainability Department diagram

My supervisor, Francisca Menichetti, had a direct relationship with me since she is the Sub-Manager and she is the only one in the department. She works closely with her intern, which allowed me to learn about various topics, especially sustainability strategies in a retail company and interaction with other departments.

2. Work Details

2.1 General Activities

As mentioned earlier, a large part of my work was focused on gathering information for the 2024 Annual Report, specifically in the sustainability section. To carry out this task, it was first necessary to collect and analyze a significant amount of information from the sustainability reports of the various Forus brands.

The first days of my internship were dedicated to reading and analyzing the company’s 2023 Annual Report, which involved several hours of work and research. This task was essential as it allowed me to familiarize myself with environmental concepts I was unfamiliar with and gain a deeper understanding of the structure of Chapter 6, titled "Our Planet and Communities," which was the chapter I had to develop for the 2024 Annual Report.

Image 3: Organization of Annual Report document

To begin this task, documents were created for each chapter of the report so they could be updated. As I mentioned earlier, I worked on chapter 6 and organized the document, as can be seen in image 3.

Columbia

* Información 2023 [Impact Report 2022](#) y Información 2024 del [Impact Report 2023](#)

	2023	2024
1	Columbia Sportswear Company (CSC), usa el Higg Facilities Environmental Module (FEM) desde 2013 para realizar un seguimiento a sus socios fabricantes. Este módulo se centra en la evaluación ambiental de las instalaciones de fabricación en la cadena de suministros midiendo 7 áreas de impacto: medioambiente, agua, residuos, aguas residuales, aire y manejo de químicos, que se evalúan con indicadores por cada área y además se promedian en el Higg FEM Median Score.	Este es el décimo año en el que se evalúan según los estándares Higgs, sus resultados han ido mejorando a lo largo de los años obteniendo un resultado 14% mayor al promedio de la industria (pág 32).

Image 4: Document Structure

Then I started gathering information for the 2024 Annual Report, where I created a well-structured document with tables for each brand, featuring two main columns: 2023 and

2024. In the first column, I wrote the information available in the 2023 Annual Report, while in the second, I added only the relevant updates for each topic. This required extensive research on the various brands in the Forus portfolio, with a big focus on Crocs and L'Occitane, as they were incorporated that same year and lacked prior information in the report. For brands like Columbia, Rockford, VF Company, and Under Armour, the task was to update the existing data, as can be seen in the image 4

However, in some cases, the sustainability reports had not yet been published, as each company has its own reporting schedule. In these situations, it was necessary to communicate directly with the brands to obtain updated information for the 2024 fiscal year. As part of this task, I drafted emails in English and coordinated meetings with the managers of each brand, to validate and complement the data. These meetings also provided key information on initiatives that were more specific and couldn't be found in sustainability reports.

Additionally, during my internship, I participated in weekly meetings with external agents (Kyklos) specialized in the REP Law. The objective of these meetings was to improve the automation of the information required to comply with the packaging regulation. Previously, the company was required to submit information on the REP Law once a year, but now it must do so monthly. Due to this change in reporting frequency, the company is seeking to automate the process.

On the other hand, a few days before Christmas, the interns were called in to support the Forus stores at Alto Las Condes Mall. This experience allowed me to gain a deeper understanding of how the brands operate, particularly in terms of sales, inventory management, and distribution. Additionally, I had the opportunity to observe how the REP Law is implemented in malls, particularly in relation to the waste management of boxes.

Lastly, during the final weeks of my internship, I focused on creating an extensive database for Francisca. This database consisted of collecting and organizing information from the catalogs of footwear, apparel, and accessories for Summer 2024 from all Forus brands.

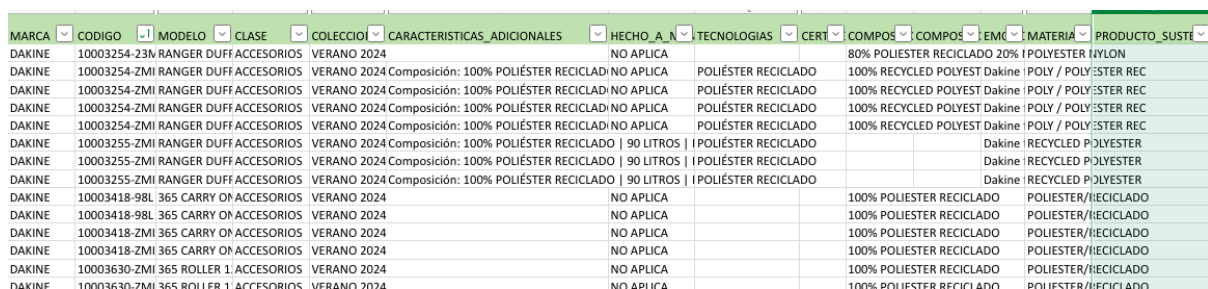

My main task was classifying sustainable products, which involved determining the sustainable attributes that could be assigned to each brand. For example, in the case of the Merrell brand, some footwear contained recycled polyester, which allowed them to be classified within the sustainable product category. To do this, it was necessary to analyze the specifications of each product in detail and structure the information in a way that made it easy to identify sustainability attributes within the catalog.

2.2 Most Challenge Activity

The most challenging task at Forus was creating a database to classify the sustainable attributes of each brand. This was particularly demanding due to my limited familiarity with advanced Excel tools. Consequently, I dedicated time to researching and exploring various functions to improve my skills, ultimately achieving an efficient and precise classification of the attributes assigned to each brand.

The creation of this database was as follows: I individually downloaded the product catalogs from each brand and then consolidated them into a single Excel file to generate a comprehensive database for the company.

The database contains approximately 7,600 SKUs (unique product identification codes) corresponding to the summer season of 2024, including all products sold in late 2024 and early 2025. In total, this excel had 109 columns, where each one represents different attributes of the product, such as brand, code, model, class, season, among others.

MARCA	CODIGO	MODELO	CLASE	COLECCION	CARACTERISTICAS_ADICIONALES	HECHO_A_N	TECNOLOGIAS	CERT	COMPOS	COMPOS	EMC	MATERIA	PRODUCTO_SUSTENTABLE

Image 5: Screenshot database

The main issue of this task and the reason it was assigned was the lack of accurate classification of sustainability products within the product catalog of each brand. As I mentioned earlier, this catalog contained 109 columns, being one of these columns called "Sustainable product". A few brands completed this column correctly, and in many other cases, the information admitted was exactly or incomplete as it can be appreciated in image 5.

The lack of proper categorization impedes the identification and analysis of products with sustainable attributes, requiring a more detailed review and classification process. In addition, it is anticipated that in the coming years, Chile will include textiles as a priority product under the REP Law, which will require companies to implement waste management systems and take responsibility for the entire lifecycle of their products.

The idea of creating this database was to make dynamic tables in Excel, which will help Francisca organize and analyze the data more easily in the future. These dynamic tables will allow her to filter and summarize the information based on the sustainable attributes of the products, making the analysis process much more efficient.

Continuing, I developed the methodology for classifying attributes in different steps. First, I added two new columns to the database: "Attributes", where I specified the characteristics

EMI	EMI	PESO	MATERI	PRODUCTO_SUST	ATRIBUTOS	COLUMNA MAESTRO

Image 6: New columns added

Then, to classify which attribute would be considered, I began to realize a deep analysis of each brand individually. Over time, I created a “dictionary” of sustainable terms, allowing me to automate and organize the product classification process, as illustrated in the following image:

Marca	Atributo	COLUMNA MAESTRO M2

Image 7: Dictionary of sustainable terms

I created this dictionary to organize all the attributes, making them easy to find. In the first column, the brands are listed, the second column contains the assigned attribute, and the third column indicates in which catalog column the attribute can be found.

To identify these terms, I utilized various Excel tools. Initially, I made numerous mistakes due to my limited knowledge of the software. However, through trial and error, I gradually optimized the process.

In image 8, it can be seen how the tool of conditional formatting works. This tool highlights cells containing a specific word; for example, in the illustration, it highlights if it says "recycled". I used keywords related to sustainability, such as "recycled," "organic," "certified leather," "ecological.", among others. I also incorporated brand specific terms like Bluesign (a sustainability certification) or Repreve (a recycled polyester fiber made from used plastic bottles).

One of the main challenges I faced was that, on some occasions, the same product had multiple sustainable attributes. For example, a shoe was made from recycled fibers and also had a sole made from BLOOM, a material derived from algae. Since the purpose of this database is to analyze the data using dynamic tables, it was not possible to write both "recycled fibers" and "BLOOM sole" in the same cell. Doing so would have messed up the organization and stopped the dynamic tables from working correctly. Because of this, whenever I faced this issue, I had to create a new row in the database. I would input all the product information again, only changing the attribute and the master column. For example, in Image 9, it can be seen a SKU with different attributes. While the product code and all other information remain the same, the only change is in the columns I created.

Image 9: Same product with different attributes

Image 9: Same product with different attributes

This task taught me the importance of attention to detail because to complete this task effectively, it was crucial to maintain full concentration at all times. Given the large volume of rows and columns in the database, it was very easy to make mistakes, such as accidentally adding or deleting a row, which could have led to errors in the entire dataset. The sheer size of the database meant that even a small oversight could affect the accuracy of the information, making attention to detail and careful organization essential throughout the process.

In conclusion, my work on the database gave Forus a solid foundation to manage its sustainable products effectively. This will not only help the company stay organized but also prepare for future regulations such as the REP Law. By accurately tracking sustainable attributes, Forus can meet the legal requirements and maintain transparency with consumers and stakeholders.

3. Analysis

3.1 Company Analysis

During my internship at Forus, I had the opportunity to observe various key aspects of its operations, including productivity, operational capacity, and teamwork.

Forus's mission is to be "Consumer Fanatic," focusing on the consumer. This means that everything the company does is designed with consumers in mind to provide them with the best experience and stand out in the industry. Since 2019, Forus has been working on a new strategy to become "phygital," combining digital and physical elements. To achieve this, they have been improving their e-commerce platforms to offer a seamless digital experience that complements their physical stores. This approach has led to significant improvements over the years. When the shift began, digital sales accounted for only 4%, but by 2023, they had grown to 26%, showing a big increase.

The experience and talent of all the employees at Forus should be highlighted. Their professionalism and dedication to their work contribute to the company's productivity and efficiency. From my experience, I observed how different teams came together to deliver the best results and how different areas worked with each other for better ideas. This was evident in my case, as I had to attend multiple meetings with various brand managers and marketing professionals.

Image 10: employees by range age

Likewise, many employees were young, as can be seen in Image 10. A total of 1,877 people were under the age of 30 out of a total of 3,431, meaning that around 50% were young. The combination of youth with more experienced employees created a collaborative work environment, where there was an exchange of ideas and knowledge among workers.

Furthermore, the company consistently provided training sessions and offered employees advanced programs and tools to facilitate their work. This left a strong impression on me, demonstrating how much the organization values and supports its team members.

Taking all factors into account, Forus has shown remarkable growth and adaptability in various aspects, such as productivity, capacity, and customer satisfaction.

3.2 Work Analysis

When analyzing my work at Forus, it is evident that, despite the company's large scale, my contributions were significant in the area where I worked. I played a key role in helping on an important annual task which is the Annual Report. This document is fundamental to the company as it responds and presents key information about its performance each year. Its objective is to provide a comprehensive overview of the organization, including strategies, risk factors, sustainability impacts, and other critical aspects. Also the company's Annual Report is essential because it ensures transparency, allowing investors and other stakeholders to understand the organization's performance and strategies. Additionally, this document complies with legal requirements and regulations established by regulatory and international entities. It also serves as a strategic decision tool, providing concrete data that helps the company define its business direction. Furthermore, it communicates the company's sustainability advancements and social responsibility efforts, which are increasingly valued by investors in the market.

In addition, I collaborated with different members of the company to create this document. As mentioned earlier, I had to meet with several of Forus' brands to consult about their progress in sustainability and social matters. Through this, I was able to meet many people within the company and enhance my social skills in the professional environment.

To minimize delays in the Annual Report creation process, I propose creating an organized index for the report. This index would allow me to easily locate the specific brand information during meetings, making the review easier, quicker and ensuring that I could present the data efficiently without wasting time.

One of the challenges I faced during the creation of the Annual Report was coordinating with different brand managers and departments. There were instances where data was delayed or lacked clarity, which slowed down the overall process. While I managed to meet deadlines, the inefficiency of data collection from certain departments could have been improved.

On the other hand, creating the database that Francisca requested was significant for the company. Before its creation, the company lacked organization and didn't have a clear structure for managing information about their sustainable products, making it difficult to ensure traceability. With the REP Law potentially coming into effect in a few years, having this data is essential to comply with the law. My work helped structure the data related to sustainability and the impact of textile products, not only facilitating analysis but also preparing the company to meet future regulatory requirements efficiently.

I made some mistakes in the database at the beginning with some Excel tools. Initially, I wasn't efficient in gathering the attributes for each brand. However, as I mentioned before, I found a solution by discovering different tools that allowed me to be more efficient when searching for these terms. Also, with such a large database, it was easy to make mistakes, so I needed to stay fully focused during the creation process to avoid errors.

I helped ensure the Annual Report was finished on time, meeting the CMF Chile deadlines and making it available to stakeholders as planned.

In conclusion, my internship at Forus allowed me to contribute to key projects like the Annual Report and the sustainability database. I improved my technical skills, strengthened my communication, and gained insight into corporate sustainability. Despite challenges, I ensured efficiency in data management and reporting, making a lasting impact while growing professionally.

4. Personal Reflection

Looking back on my personal experience, this internship has been incredibly valuable for my professional and personal development. I was very nervous to start the internship since I didn't have any experience working in a big company like Forus. I always felt that perhaps the things I had learned in university wouldn't be very useful in practice, but after doing this work, my perception changed completely. This opportunity helped me clear up all my doubts, face new challenges, and make me have a big personal growth in all aspects.

In the social aspect, collaborating with different members of the company was crucial to my personal growth. I was able to integrate into the team quickly and build strong working relationships. This made me analyze the importance of interpersonal relationships in business and how important they are for efficient work. All members of Forus were very supportive and always had a positive attitude toward helping me, which made me very grateful for the opportunity to join this internship.

Being in projects such as the Annual Report, which is a critical document for many companies, not only taught me to handle sensitive information but also helped me to understand how these documents are important to the business context. This task makes me learn how to engage with different professionals from different backgrounds, improving my communication and teamwork skills. I also learned about the understanding of the importance of deadlines and how it is necessary to manage my time in an effective way.

Moreover, being part of a large company like Forus, with its various departments, allowed me to appreciate the value of adaptability and learn from diverse perspectives. I learned to navigate different work styles and understand how each department's contribution impacts the larger goals of the company. This helped me improve my problem-solving skills and adapt to changing circumstances with more flexibility.

Additionally, as I worked on various assignments, I often had to find creative solutions to overcome challenges. This experience taught me how to handle pressure and prioritize tasks effectively.

In conclusion, my internship at Forus allowed me to grow both professionally and personally. This experience boosted my confidence in my abilities and significantly improved my communication and teamwork skills. Additionally, I gained invaluable knowledge by working in a large organization. The challenges I faced and the lessons I learned throughout this program have better prepared me for my future career. I am truly grateful for the opportunity to have been part of the Forus team.
